SendoCem MTA

SendoCem MTA is a ready-to-use, pre-mixed calcium-silicate-based bioceramic endodontic cement designed for various vital pulp treatments. It absorbs moisture from the environment to initiate the hydration reaction, allowing it to set without the need to mix powder and liquid.

SendoCem MTA offers excellent biocompatibility, bioactivity and sealing properties, as well as antibacterial effects, making it an ideal choice for vital pulp treatments.

Its strong sealing ability is due to its bioactive nature, which releases calcium ions and promotes the formation of an apatite layer when exposed to phosphate-containing physiological fluids.

• PRE-MIXED SYRINGE

- Ready to use
- No mixing needed, always a consistent result
- Easy and direct application- with a cannula that reaches into deep narrow areas

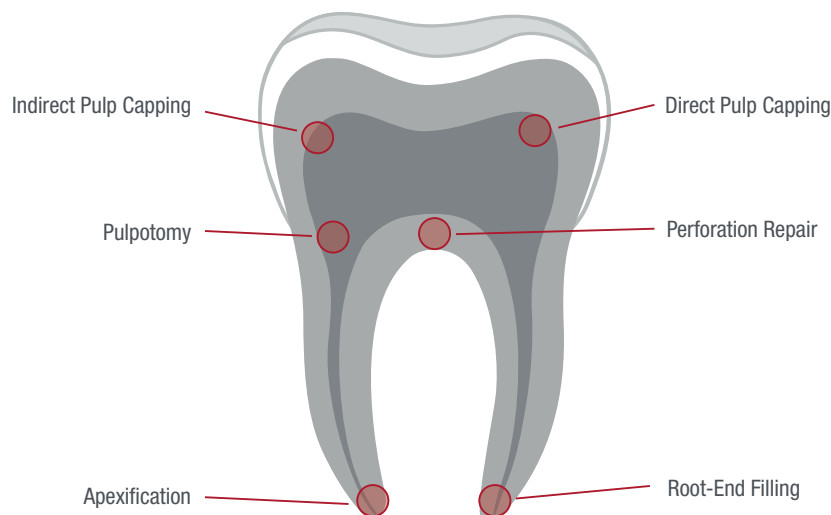

• FAST SETTING TIME

- 3-5 minutes

EXCELLENT PHYSICAL PROPERTIES

- High compressive strength*
- Low solubility**
- High radiopacity
- High resistance to discolouration, contains no bismuth oxide

WIDE RANGE OF INDICATIONS
